Project Name: Smart Lender: Applicant Credibility Prediction for Loan Approval	Maximum Marks: 4 Marks

EMPATHY MAP TEMPLATE

Empathy Map Template

Understand the user Sarah (a retail loan credit officer) from four dimensions regarding the loan evaluation bottleneck.

SAYS	THINKS
- 'I have to manually review income, credit histories, and property locations for every loan.' - 'Processing a single file takes hours.' - 'I need a fast system to filter out bad profiles.'	- 'Will an automated model accidentally approve a high-risk applicant?' - 'I want to see the model's confidence probability.' - 'The system needs to be simple to use.'
DOES	FEELS
- Reviews applicant incomes, marital status, and credit histories. - Rejects profiles with poor credit history manually. - Writes audit logs explaining loan decisions.	- Stressed by the backlog of loan applications. - Anxious about increasing defaults. - Relieved when tools automate basic screening checks.

Persona Name: Sarah, Loan Underwriting Admin
