

Date: 07 July 2026	Team ID: SB-7429
Project Name: Smart Lender: Applicant Credibility Prediction for Loan Approval	Maximum Marks: 5 Marks

PROBLEM-SOLUTION FIT TEMPLATE

Problem-Solution Fit Canvas

1. CUSTOMER SEGMENTS - Commercial banks - Digital retail lenders - Underwriting teams - Loan applicants	2. PROBLEMS / PAINS - Slow processing times (days) - High cost per application - Human underwriting bias - Default losses (NPAs)	3. TRIGGERS TO ACT - High customer churn rate - Escalating retail NPAs - Competitive market pressure for instant decisions
4. EMOTIONS (Before/After) - Before: Stressed, overwhelmed, anxious - After: Relieved, confident, quick decisions	5. AVAILABLE SOLUTIONS - Manual underwriters (slow) - Simple linear scorecards (fail on non-linear inputs)	6. CUSTOMER LIMITATIONS - Limited computing resources (Intel i3/4GB RAM) - Need transparent parameters for auditing
7. BEHAVIOR & INTENSITY - Risk teams reviewing files manually (high workload, slow throughput)	8. CHANNELS OF BEHAVIOR - Web portals for form entry - CSV logs for analytics and data tracking	9. PROBLEM ROOT CAUSE - Manual underwriting cannot keep up with digital volumes or capture complex patterns
10. YOUR PROPOSED SOLUTION (SL) - Smart Lender: A machine learning-powered web underwriting portal featuring a pre-trained, scaled XGBoost classifier (83.7% accuracy) to evaluate 11 applicant features instantly, styled with a premium dark fintech theme.
